31 mins

Frans de Waal has been named one of TIME magazine's 100 Most Influential People. In *Different*, world-renowned primatologist Frans de Waal draws on decades of observation and studies of both human and animal behaviour to argue that despite the linkage between gender and biological sex, biology does not automatically support the traditional gender roles in human societies. While humans and other primates do share some behavioural differences, biology offers no justification for existing gender inequalities.
